

Innovative lifting systems for glass sheets

Italcarrelli® has been manufacturing lifting trucks and accessories for the storage and transport of goods since 1962. Based in Vicenza, north-east Italy, the company is equipped for the planning and manufacturing of special machinery, as well as post-sales assistance.

The recent introduction of special machinery for the transport of glass sheets in the company's product range includes: the *TPEN* Negrin® series of platform trucks, and the *PTN* Negrin® series of in-loader trucks. These two machines, says the company, are the ideal solution for the transport of glass sheets on stillages, with weights of 5, 10 and 33 tons. Thanks to the innovative *sicurlift* lifting system (patent pending), Italcarrelli® maximum stability is guaranteed thanks to double mechanical/hydraulic safety.

Each model has been created using the highest quality standards and equipment and the most advanced safety systems.

Negrin® TPEN 330 platform truck

According to Italcarrelli the high level of manoeuvrability and the maximum attention paid to the details, make these trucks the fastest and best solution to problems regarding transport of glass sheets.

All transporters can be, on request, equipped with accessories such as holding arms for glass on "A" or "L" shaped stillages, video camera system,

Negrin® PTN 330 in-loader truck loaded with "L" shaped stillages

reversible guide system, closed cabin with operator seated, spare batteries with rapid exchange, and all transporters can be diesel powered.

All trucks have been manufactured according to the norms in force regarding accident prevention, with the maximum Italcarrelli® guarantee.

Italcarrelli® will be present at the November *glasstec* exhibition, in hall 12, at stand A52.
